

TO: Applicants for Medical Staff Membership and Clinical Privileges
Providence Regional Medical Center Everett

FROM: Credentials Committee

When requesting any privilege on these forms, please remember that to receive a privilege, you must have been trained to perform the procedure or service and have unqualified endorsement in writing from either the director of the residency training program or the training director of a pre-approved course. Please pay special attention to Level III privileges. One must have either subspecialty training or its equivalency and have unqualified endorsement to receive a Level III privilege. You are encouraged to confer with your partner to see if he/she has such a privilege in order that care of a patient can be continued in your absence. This will help guide you in your request and expedite your credentialing process. The Credentials Committee looks critically at Level III privileges.
